## Ligament Injuries of Knee

[www.thewhanngroup.com](http://www.thewhanngroup.com)

Slide Presented: 10/29/2024 6:11:32 PM

### WHAT ARE KNEE LIGAMENT INJURIES?

Ligaments are tough bands of tissue that connect the bones in your body. There are four ligaments in the knee that are prone to injury:

- Anterior cruciate ligament (ACL)
- Posterior cruciate ligament (PCL)
- Lateral collateral ligament (LCL)
- Medial collateral ligament (MCL)

Slide Presented: 10/29/2024 6:11:34 PM

### COMMON SIGNS & SYMPTOMS

1   Pain, often sudden and severe	3   Swelling, feeling of looseness
2   A loud pop or snap during the injury	4   Inability to put weight on the joint without pain

Slide Presented: 10/29/2024 6:11:35 PM

### Anterior Cruciate Ligament Injury

An ACL injury is a tear or sprain of the anterior cruciate ligament (ACL) — one of the major ligaments in knee.

#### Symptoms

- Popping sensation
- Severe pain
- Rapid swelling
- Loss of range of motion
- A feeling of instability

#### Causes

- Happen during sports and fitness activities that can put stress on the knee, like
- Suddenly slowing down and changing direction (cutting)
- Pivoting with your foot firmly planted
- Landing awkwardly from a jump
- Stopping suddenly
- Collision

Slide Presented: 10/29/2024 6:11:36 PM

### Posterior Cruciate Ligament Injury

The posterior cruciate ligament (PCL) is a ligament within the knee.

Injuries that tear the PCL often damage some of the other ligaments or cartilage in the knee.

#### Causes of PCL Injuries

- Motor accident
- Falling on the knee while it's bent
- Sports injuries

#### Symptoms Injuries

- Swelling
- Knee pain
- Wobbly sensation
- Trouble walking

Slide Presented: 10/29/2024 6:11:38 PM

### LATERAL COLLATERAL LIGAMENT

The Lateral Collateral Ligament (LCL) is one of the four major ligaments that help stabilize the knee joint when performing movement with the leg.

Typically, the LCL is injured when there is direct force on the inside of the knee. This can cause the LCL ligament to be stretch or torn beyond its normal range of motion.

Symptoms are Pain and tenderness along with swelling, feeling of instability in their knee when walking.

Slide Presented: 10/29/2024 6:11:39 PM

### Medial Collateral Ligament Injury

A medial collateral ligament (MCL) injury is a stretch, partial tear, or complete tear of the ligament on the inside of the knee.

#### CAUSES

MCL injuries often happen during contact sports. Direct contact to the outside of the knee during a collision can push the knee sideways. This puts a lot of pressure on the MCL which can tear.

Slide Presented: 10/29/2024 6:11:40 PM

### Start Video Conference

Welcome to Live Concierge, which enables you to deliver information and provide services to your patients in a best-in-class fashion. Information, including video and audio streaming, can be presented in a live connected session to a patient on their phone. Once finished, the presentation materials along with any related transactional documents are all date and time stamped, and delivered to the patient and uploaded to the server.

To send an invitation for your Live Concierge session, please enter the name and email address of the person you want to invite as Participant #1. If there are additional participants, enter their name and email address as Participant #2 and so on and then click the "Start" button. The Participant(s) simply go to their email and click on the link you sent and they will be in a live connected session with you on Live Concierge.
